Annual Average Daily Traffic (AADT)  
Traffic Counts Recorded in CY 2012

The traffic counts shown on this map represent estimates of the Annual Average Daily Traffic (AADT) for the year ending December 31, 2012. These AADT's are derived mainly from 24-hour volumes recorded by portable traffic counters. These short-term counts are adjusted for day-of-week and seasonal variations using data from 80 continuous permanent counters. An axle correction factor has been applied to each short-term count. Heavy commercial volumes are derived from short-term vehicle classifier counts. These count locations are indicated by bold numbers on the map. Heavy commercial counts at other locations are estimated from nearby counts on the same route or from other routes known to have similar traffic characteristics. AADT's that are provided by continuous counters are underlined.
