

**REQUIRED CONTRACT PROVISION - 04-06-09-R01 (Rev. 09/18)**

**ITS UNIT COST**

The Contractor shall comply with Section 859 of the Standard Specifications when providing and installing elements of the Intelligent Transportation System (ITS). Add the following at the end of Section 859.4 Measurement and Payment.

The Contractor will submit a unit cost in this Required Contract Provision for each individual ITS item the contract requires. Even though the bid item is a lump sum price, the Engineer will adjust the lump sum price by any increase or decrease in the quantities indicated in the Summary of Quantities shown in the plans. To calculate the adjustment, the Engineer will determine the overrun or underrun quantity for each ITS item listed in the contract. The Engineer will multiply any overrun or underrun quantity by the unit cost the Contractor provided below. The Engineer will increase the lump sum price by the cost of any overruns and decrease the lump sum price by the cost of any underruns. **The sum of the unit costs multiplied by the items listed in the Summary of Quantities for each site or the entire project must be less than or equal to the lump sum price, or the unit cost submittal will be rejected. Contractor will then be required to resubmit this Required Contract Provision that meets this requirement for the bid to be accepted.** The Engineer will only negotiate or receive new prices on ITS items if they were not identified in the original Summary of Quantities.

The Secretary may reject this Proposal if the Contractor fails to complete this Required Contract Provision when submitting their Proposal.
