

REQUIRED CONTRACT PROVISION - 05-18-07-R02 (Rev. 03/15)

REPAIR (STRUCTURES) UNIT COST

For this Project, the structure repairs will comply with SECTION 727. Add the following at the end of subsection 727.4 Measurement and Payment.

The Contractor will submit a unit cost in this Required Contract Provision for each bridge repair item the contract requires. Even though the bid item is a lump sum price, the Engineer will adjust the lump sum price by any increases or decreases in the quantities shown in the Summary of Quantities. To calculate the adjustment, the Engineer will determine the overrun or underrun quantity for each bridge repair item. The Engineer will multiply any overrun or underrun quantity by the unit cost the Contractor furnished below. The Engineer will increase the lump sum price by the cost of any overruns and decrease the lump sum price by the cost of any underruns. The Engineer will only negotiate or receive new prices on bridge repair if such items were not identified in the original Summary of Quantities.

The Secretary may reject this Proposal if the Contractor fails to complete this Required Contract Provision when submitting their Proposal.
